

# Microsoft Stream - video sharing

The best way to share video content to other college users (staff and students) is to upload it to the Stream service - <https://web.microsoftstream.com/>

All staff and students have access to this service both on and off campus but no one outside of the college can access any content uploaded within our tenancy

<https://docs.microsoft.com/en-us/stream/portal-upload-video>

If you need to restrict a video to a smaller audience (rather than the complete college - by default) this can also be done by applying permissions either using group/channels or directly on each video after you have uploaded the videos

<https://docs.microsoft.com/en-us/stream/portal-permissions>

**Please note that like all video streaming services, uploading times can vary and take a while especially if the video files are big**
